Switzerland

Dear Ms. Khan

Certification of the parallel Investment in the propose GCF project area

This is to certify that the Climate Smart Irrigated Agriculture Project executed by the Ministry of Agriculture has already planned to invest Rs.4000 Mn (approximately US\$ 23 mn) in the areas of Anuradhapura and Puttalam districts which are coming under the benefitted area of the propose project on “Strengthening climate resilience for subsistence farmers and agricultural plantation communities residing in the vulnerable cascades, watershed areas and downstream of the Yan Oya, Kala Oya and Mi Oya of Sri Lanka.”

In the context of climate vulnerability in the dry zone of Sri Lanka it is an important requirement to enhance the investment in climate Smart activities as such planned by the Climate Smart Irrigated Agriculture Project as well as the Strengthening climate resilience for subsistence farmers and agricultural plantation communities residing in the vulnerable cascades, watershed areas and downstream of the said river basins catchment of Sri Lanka. We observed that the scope of the both projects is very much similar and they have advantage for each other to ensure the expected outcomes and impact of both.

We look forward to our continuing partnership during the implementation of these projects and to mainstream climate resilience measures through improved land use management and agricultural practices. the project area maps also annexed for your easy reference please.

Yours faithfully,

Eng. N. Sivalingam
Project Director
