

Annex 16. Maps indicating the location of proposed interventions

Project title: Ecosystem-based Adaptation in the Indian Ocean

Project Duration: 10 years

Accredited Entity: Agence Française de Développement (AFD)

Executing Entity: Critical Ecosystem Partnership Fund (CEPF)

Document Date: 30 March 2020

Annex 16. Maps indicating the locations of proposed interventions – Ecosystem based Adaptation in the Indian Ocean

The Programme will work in four countries of the Indian Ocean: Comoros, Madagascar, Mauritius and Seychelles.

The exact areas where the Programme will work will be determined based on a prioritisation process as part of the updating of the Ecosystem Profile for the biodiversity hotspots planned under Component 1 of the Programme. The priorities will be set based on analysis of the importance of Key Biodiversity Areas (KBAs) for ecosystem service provision for people vulnerable to climate change. A subset of the most important KBAs for ecosystem provision will be chosen based on a broad consultation process in each of the Project countries that reaches a consensus on the highest priorities for the Project's investment taking into account other conservation and EbA initiatives. Based on open Calls for Proposals, Civil Society Organizations will then be invited to propose specific EbA subprojects within the priority KBAs. The current locations of KBAs in each of the Project countries are described in Annex 2, the Feasibility Study.
