

## Annex 5. Map of project locations with GPS coordinates

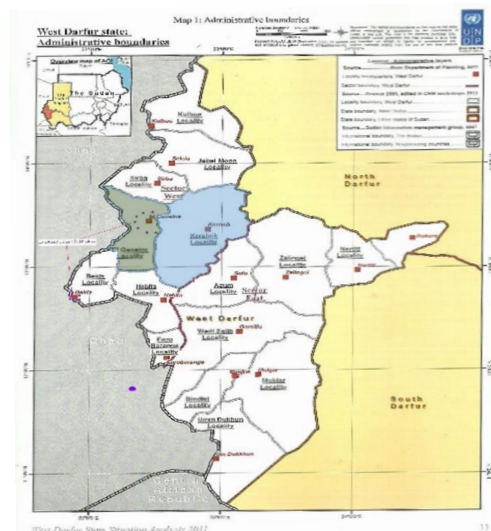

This annex describes locations of targeted communities together with additional socioeconomic and demographic details.

### 1) West Darfur

A total of 2,829 households in 5 villages in the Genana and Krenik localities are included in the project. The locality locations are indicated in the map at right (green- and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a semi-dry low rainfall savannah ecological zone and are characterized by a high level of poverty. There is minimal water infrastructure, mostly consisting Hafir, dams, and water yards.

Traditional agriculture is the most important form of production and characterized by various types of small-scale sedentary cultivation and pastoralism. Integration of animal and crop production is traditionally practiced as is horticulture along seasonal streams.

Target localities in West Darfur	Village		Direct beneficiaries		Indirect beneficiaries		All beneficiaries

### GREEN CLIMATE FUND FUNDING PROPOSAL

#### 2) Central Darfur

A total of 7,727 households in 13 villages in the Zalingi and Azoom localities are included in the project. The locality locations are indicated in the map at right (brown- and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a low rainfall savannah ecological zone and are characterized by a high level of poverty. There is virtually no water infrastructure in the region.

Traditional agriculture is the most important form of production and characterized by various types of small-scale sedentary cultivation and pastoralism. Integration of animal and crop production is traditionally practiced. Small scale irrigated horticulture production is widely practiced by streams and seasonal water courses.

Target localities in Central Darfur	Village		Direct beneficiaries		Indirect beneficiaries		All beneficiaries	
	#	Name	# of households	Population	# of households	Population	# of households	Population

#### 3) East Darfur

A total of 47,700 households in 10 villages in the El Dain, Firdous and Asalia localities are included in the project. The locality locations are indicated in the map at right (green-shaded, purple-shaded, and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a low rainfall woodland savannah ecological zone and are characterized by a high level of poverty. There is minimal water infrastructure.

Traditional agriculture is the most important form of production and characterized by various types of small-scale sedentary cultivation and pastoralism, with horticulture practices along seasonal streams.

#### 4) Western Kordofan

A total of 5,683 households in 28 villages in the Asalam, Al Nohoud, and Alsunut localities are included in the project. The locality locations are indicated in the map at right (brown-shaded, purple-shaded, and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a low rainfall woodland savannah ecological zone and are characterized by a high level of poverty. There is minimal water infrastructure.

The local economy depends upon small scale rain fed traditional production systems of cropping and animal husbandry. There is an exclusive reliance on rainfall for agricultural production.

#### 6) Kassala State

A total of 74,208 households in 16 villages in the Kassala, Telkuk, and Nhar Atbra localities are included in the project. The locality locations are indicated in the map at right (brown-shaded, purple-shaded, and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in an ecological zone that spans semi-desert as well as a low rainfall savannah zones. The villages are characterized by a high level of poverty. There is modest water infrastructure, mostly consisting of storage dams, and groundwater wells.

The local economy depends upon small scale rain fed traditional production systems of cropping and animal husbandry. There is an exclusive reliance on rainfall for agricultural production.

#### 7) Red Sea State

A total of 52,000 households in 15 villages in the Agig, Dordaib/Haya, and Guneb Olib localities are included in the project. The locality locations are indicated in the map at right (brown-shaded, purple-shaded, and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a semi-desert ecological zone and are characterized by a high level of poverty. There is modest water infrastructure, mostly consisting of storage dams, and groundwater wells.

The main livelihood groups are pastoralists that rely on seasonal water courses. Other livelihood sources are limited traditional cultivation and fisheries in coastal areas. The state has experienced long period of extended drought conditions, with over 90% of cereals consumed coming from other parts of Sudan.

## Annex IX – Maps

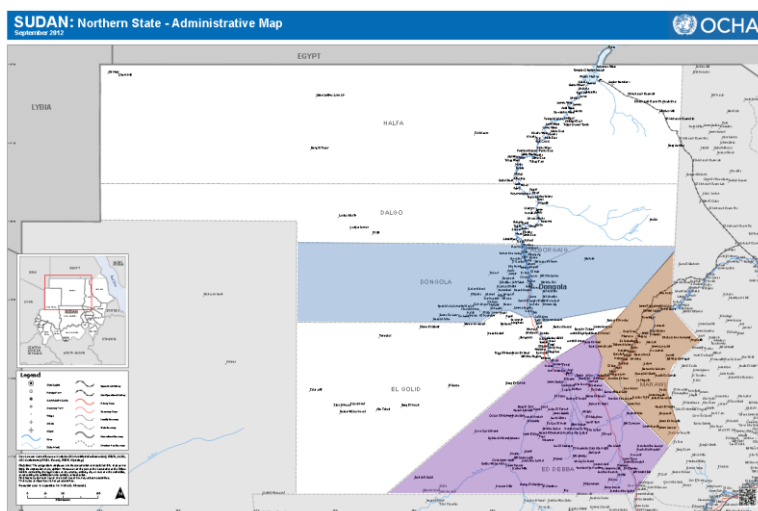

### GREEN CLIMATE FUND FUNDING PROPOSAL

#### 8) Northern State

A total of 8,929 households in 18 villages in the Dongola, Marawi, and Al Dabaha localities are included in the project. The locality locations are indicated in the map at right (brown-shaded, purple-shaded, and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a semi-desert ecological zone and are characterized by a high level of poverty. There is modest water infrastructure, mostly consisting of storage dams, and groundwater wells.

The local economy depends upon both irrigated and rained agriculture. Nile which passes through the region from south to north. Most of the population is engaged in intensive agricultural production along both banks. Horticulture production is widely practiced.

## 9) Khartoum State

A total of 2,347 households in 9 villages in rural areas of the Omdurman and Sharg El Nil localities are included in the project. These households are among the 20% of the population that are located in rural areas. The locality locations are indicated in the map at right (brown- and blue-shaded areas). The village locations are specified in the Table below, together with a breakdown in population and direct/indirect beneficiaries.

The villages of the direct beneficiaries are located in a semi-desert ecological zone and are characterized by a high level of poverty. There is significant water infrastructure.

The local economy depends upon both irrigated and rained agriculture. Irrigated agricultural production along both banks of the Nile. Horticulture production is widely practiced. Commercial livestock in ranches. Grazing along seasonal streams and limited traditional cultivation and pastoralism in the eastern and northern-eastern part.

### GREEN CLIMATE FUND FUNDING PROPOSAL

#### 10) Summary

In summary, the Table below shows the spatial focus of the project to be on a total of 211,773 subsistence farming households distributed among 138 villages across the 9 states. These are the primary beneficiaries of project activities. These households correspond to a population of about 1,181,538 people, or roughly 30% of the total population in the targeted villages. In addition, a further 2,571,315 people are indirect beneficiaries of project activities.
