

Theory of change for Argentina’s proposal within the framework of the Green Climate Fund Pilot Programme on Results-based Payments for REDD+ (2014-2016 period)

Objective: Strengthen sustainable management of native forests with a view to contribute to climate change mitigation and to reduce forest and forest-dependent communities vulnerability.

Outcome. Reduced emissions from land use, deforestation, forest degradation, sustainable forest management, conservation and enhancement of forest carbon stocks.

Assumptions:

A 1. Relevant value chains and markets, with productive potential at sufficient scales.

A.2 Relevant stakeholders participate actively.

A. 3 Indigenous peoples, peasants and small farmers' communities participate actively.

A.4 Beneficiaries have the statutory possibility of legally accessing the resource.

A.5 Main needs for support to purchase equipment and make improvements have been identified.

A.6 National guidelines have been adapted to the local level.

A.7 There is effective engagement of stakeholders at local level.

A.8 There is a support team of extensionists to develop and help implement MBGI plans.

A.9 There is commitment of local communities to support implementation of restoration activities.

A.10 Relevant stakeholders have been strategically engaged and coordinated at the local level.

A.11 National and local authorities have been involved and provide support to project implementation.

A.12 The most relevant information needs for project implementation have been identified.

A.13 Appropriate markets to sell resulting products have been identified.
