

Output	Activity	Direct Beneficiaries			Indirect Beneficiaries		
		Total	Male	Female	Total	Male	Female
Output 2.1	Activity 2.1.2: Provisioning and upgrading of health facilities to achieve climate resilience. Technical solutions include the provision of UV sterilising equipment, improved rain guttering, PE water storage tanks, and membrane filters (plus consumables) to ensure resilient water supplies in cases of tropical cyclones and other extreme weather events. Because gastroenteritis and other water-borne illnesses occur regularly in the Cook Islands – and are exacerbated by droughts (which increase reliance on untreated boreholes, wells, and other fall-back water sources) and extreme rain events (which can overwhelm storm drains and bring sewerage runoff in contact with freshwater sources) – this solution is intended to address both acute (DRR/DRM) and chronic climate-related water security issues. These water solutions will be coupled with roof-mounted solar PV arrays and battery backups for continuous power during extreme weather events and local power cuts.	15,040 ¹	7,392	7,648	871 ²	428	443
Output 3.2	Activity 3.2.1: innovative communications tools (including Cook Islands Māori-language programming) to communicate risk reduction options relevant to CSHRs (including heat-related illness, mental health awareness, and respiratory disease prophylaxis), and disseminate/share these knowledge products and evidence-based practices through visual media, school resources, SRIC materials, etc. These communications tools will be selected following the communications strategy scoping exercise in Activity 1.1.4. An important complement to physical and electronic media outreach will come via the employment of a Vaka (traditional Cook Islands sailing vessel) for fieldwork, which will weave together elements of Te Ka'a tei itiki ripiri ia tatou (representing the linking together of peoples and enua [land] that make up the thriving papa'anga [genealogy] of the Cook Islands), to perform outreach activities on remote islands and shuttle equipment/supplies, promote ecological literacy, and deliver targeted information on CSHRs in a culture- and reo- [Cook Islands Māori language-] affirming fashion.	15,040	7,392	7,648	871	428	443

¹ Based on [2021 Cook Islands Census](#) values of 7,648 females, 7,392 males, 4,681 occupied HHs.

² Indirect beneficiaries are derived from the number of overseas Cook Islands citizens (80,000 in NZ [per NZ MFAT](#), 7,100 in Australia [per ABS](#)) who are projected to avail themselves of health services upon return, within the 5-year project period (figures per TMO estimate Dec 2023). Sex disaggregation based on 2021 Cook Islands Census sex proportions.
