TO the kind attention of the Green Climate Fund Secretariat,

Subject: Enhancing the resilience of Serbian Forests and the carbon storage potential of the country to support and boost the decarbonisation process through adaptation and mitigation investments

The Assembly of Autonomous Province Vojvodina established the Public Enterprise "Vode Vojvodine" in 2002 with the main purpose of managing waters on the territory of AP Vojvodina. Main tasks of our institution are: (1) continuous, professional and efficient management of waters to enable utilisation of water equal basis for everyone, and (2) common planning of maintenance, development and improvement of activities which secure technical and technological, as well as economical unity of water management system of AP Vojvodina.

The Public Enterprise "Vode Vojvodine" hereby communicate its appreciation for the Concept note and confirms that the objectives of the perspective project align with the national and provincial priorities as defined in the Country Work Programme as well as the Nationally Determined Contribution to the Paris Agreement.

The proposed project offers a multi-directional approach weaving together forest management, forest governance and private sector to reduce vulnerability of forest ecosystems to climate change. Through a multi-stakeholder approach bringing together policy and sectoral decision makers, local communities and private businesses, this project is looking to secure an

inclusive and participatory planning for achieving climate resilience. We believe this project will contribute to climate change mitigation and adaptation, as well as enable a paradigm shift in Serbian forest management sector towards sustainability and resilience.

We look forward to further collaborating both during the design phase and execution of the project by facilitating knowledge exchanges and liaising with companies and other actors.

Appreciatively,

Director
Srđan Kružević
