## Green Climate Fund (GCF)

Dear Sir/Madam,

### **Letter of Support and Co-financing to GCF Funded “Climate-resilient landscapes for sustainable livelihoods in northern Ghana” Project**

The Ghana Meteorological Agency (GMet) expresses its commitment and support for the “Climate-resilient landscapes for sustainable livelihoods in northern Ghana” Project to improve weather and climate information and early warning as submitted by the project consortium to Green Climate Fund (GCF). Ghana is seeking funding support for the implementation of the above-mentioned project via UN Environment Programme (UNEP).

The impact of high-extreme weather, and climate change is increasing, which is affecting sensitive sectors of the economy, especially agriculture. This project's outcomes are crucial for strengthening weather and climate services, improving early warning capabilities, and building essential climate resilience within the agriculture sector.

In this regard, we affirm our commitment to providing in-kind co-financing support for the project's implementation, estimated at USD 1,400,000.00. This contribution includes the provision of office space, technical experts, man-hours, and utilities. Furthermore, we are committed to actively engaging in the project's implementation, leveraging our national mandate to deliver relevant meteorological information, advice, and warnings. These services benefit key sectors such as agriculture, aviation (civil and military), surface and marine transport, operational hydrology, and energy and water resource management, ultimately mitigating the impact of natural disasters like floods, storms, and droughts on socio-economic development and projects.

We are confident that the project's achievements will significantly enhance national capacity for climate change management and resilience, aligning directly with our priority areas. Consequently, we are pleased to confirm our support for this project outline and are committed to extensive collaboration with the consortium for its successful realization.

Yours sincerely,

**DR. ERIC ASUMAN**  
**DIRECTOR-GENERAL & PR WITH WMO**
