Subject: Statement on Acted's Approach to Environmental and Social Risk Assessment

Dear Sir/Madam,

On behalf of Acted, I hereby confirm that the organization has established and applies a structured approach to environmental and social risk assessment in the design and implementation of its projects.

Acted uses the enclosed Environmental and Social Screening Tool as its standard mechanism for identifying, assessing, and managing potential environmental and social risks and impacts. This tool has been developed to be fully consistent with, and aligned to, the Green Climate Fund's eight Environmental and Social Performance Standards (PS1–PS8).

The tool is applied systematically during project formulation and throughout implementation to ensure that:

- Potential risks and impacts are identified early and addressed through appropriate mitigation measures;
- Projects adhere to GCF requirements and international best practices;
- Environmental and social sustainability actions are actively integrated into Acted's operations and programs.

Yours faithfully,

Marie-Pierre CALEY
Chief Executive Officer
