GCF REGIONAL DIALOGUE

with EAST AND SOUTH ASIA

Colombo, Sri Lanka
14–17 September 2026

Country Platforms

Approach & Idea in developing the Bangladesh Country Platform

Md. Assadekjaman

Senior Assistant Secretary

Economic Relations Division (ERD)

Ministry of Finance, Bangladesh

Colombo, Sri Lanka

14–17 September 2026

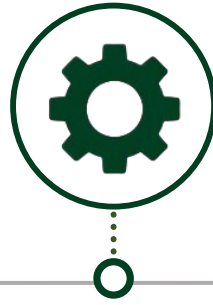

Bangladesh Climate Development Partnership (BCDP)

GCF.10

Platform Focus

- Whole-of-society & whole-of-economy
- Mitigation and adaptation, together
- Climate-resilient, green transition

Core Functions

- Plans (NAP, NDC, LTS) → investable pipelines
- Finance at scale and speed
- Climate built into sectoral & fiscal planning

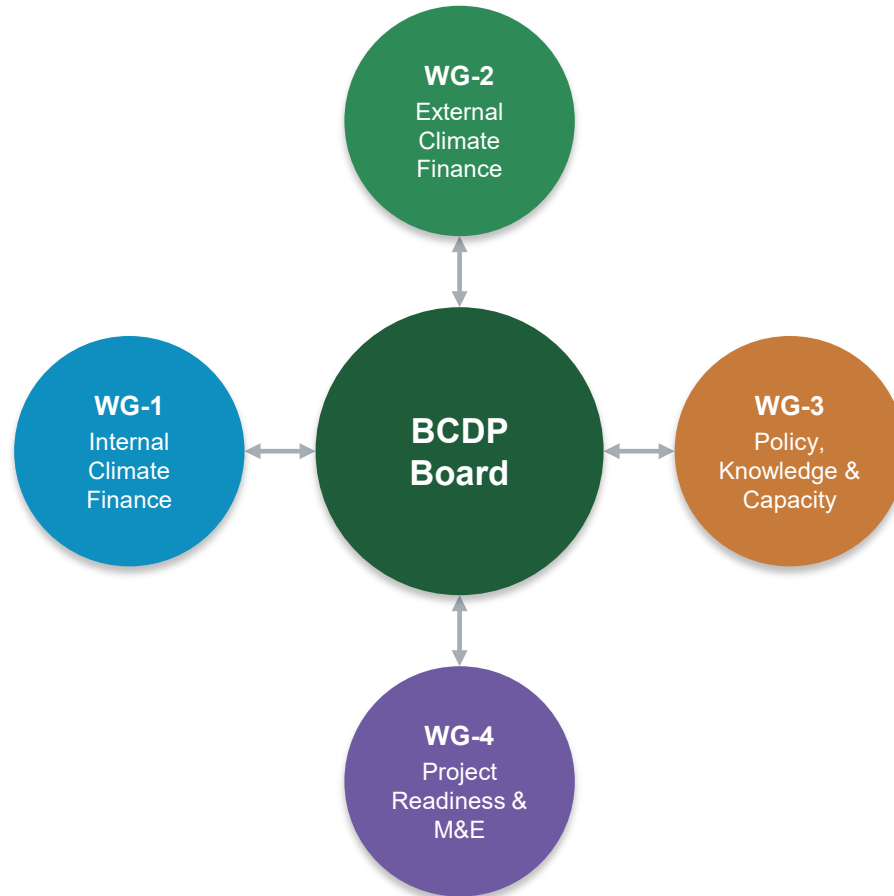

Institutional Structure

- A Board with four Working Groups
- Chaired by the Principal Secretary to the PM
- Secretariat hosted by MoEFCC

One of the world's first country platforms to advance **BOTH mitigation and adaptation**

A dynamic and adaptive architecture

From plans to a five-year investable pipeline

- **Five-year (2026–2030) project portfolio** — aligned to the national five-year framework; thrust sectors: agriculture, energy, transport & infrastructure.
- **A cross-sectoral Core Team** — multidisciplinary, designs each project (concept & initial design).
- **A Senior Climate Project Portfolio Group (SCPPG)** — structures, sequences & adopts the portfolio.
- **Institutional MEL** — tracks resourcing and implementation.

BCDP walks the walk — action, not just concepts.

Why BCDP can be a model for peers in the region

First to integrate at scale

Advances mitigation and adaptation together — among the world's first country platforms to do so.

Highest-level ownership

A super-ministerial Board chaired by the Principal Secretary to the Prime Minister.

Institutionalised, not ad hoc

Anchored in the national Planning Process and the Allocation of Business of the Government.

Whole-of-society & economy

Line ministries, DPs, private sector, CSOs, academia and IPLC at one table; climate in sectoral & fiscal planning.

One architecture, less fragmentation

Cuts duplication, overlaps and interface gaps; improves coherence across climate action.

Plans into bankable pipelines

Turns NAP, NDC & LTS into investable projects at scale and speed, with built-in MEL — adaptive as needs evolve.

Thank you

Let's connect — Bangladesh welcomes peer exchange on country platforms.

Happy to share the BCDP journey and learn together with peers across the region.
