## MANGROVE FOREST REHABILITATION AND PROTECTION FOR RESILIENCY OF COASTAL ECOSYSTEMS AND HUMAN COMMUNITIES TO CLIMATE CHANGE IMPACTS

Mangroves reforestation and rehabilitation in three **300,000 hectares** of at-risk coastal areas, as well as the of other mangrove areas into eco-tourism sites.

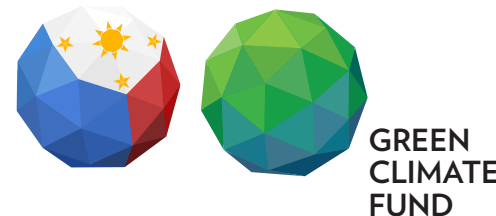

Mangroves **sequester 4 tons of carbon per hectare per year**, serves as a strong line defense against the impacts of strong typhoons, waves, currents, and associated flooding occurrences.

An estimate of **525,000 Filipino people** would be employed to green jobs involved in mangrove reforestation, rehabilitation, and management, which would directly benefit **2.6 million household members**.

Concept Note Development: April 2017

Funding Proposal Development: July 2017
