# Institutional architecture of national GCF EDA pilot programmes

- EDA Pilot Phase is to devolve funding decisions (activity approvals) from the GCF to an accredited National Implementing Entity
- Test ('pilot') in-country funding mechanisms that combine a consolidation of international support at the national level
- Executed through national oversight and steering body, and in-country devolved funding approval through local intermediaries.

### Project components

Component 1  
(US\$2 million)

Building openness, transparency and stakeholder participation for enhanced direct access

Component 2  
(US\$ 9 million)

Demonstrating enhanced direct access for the public sector - concrete community-based adaptation

Component 3  
(US\$3 million)

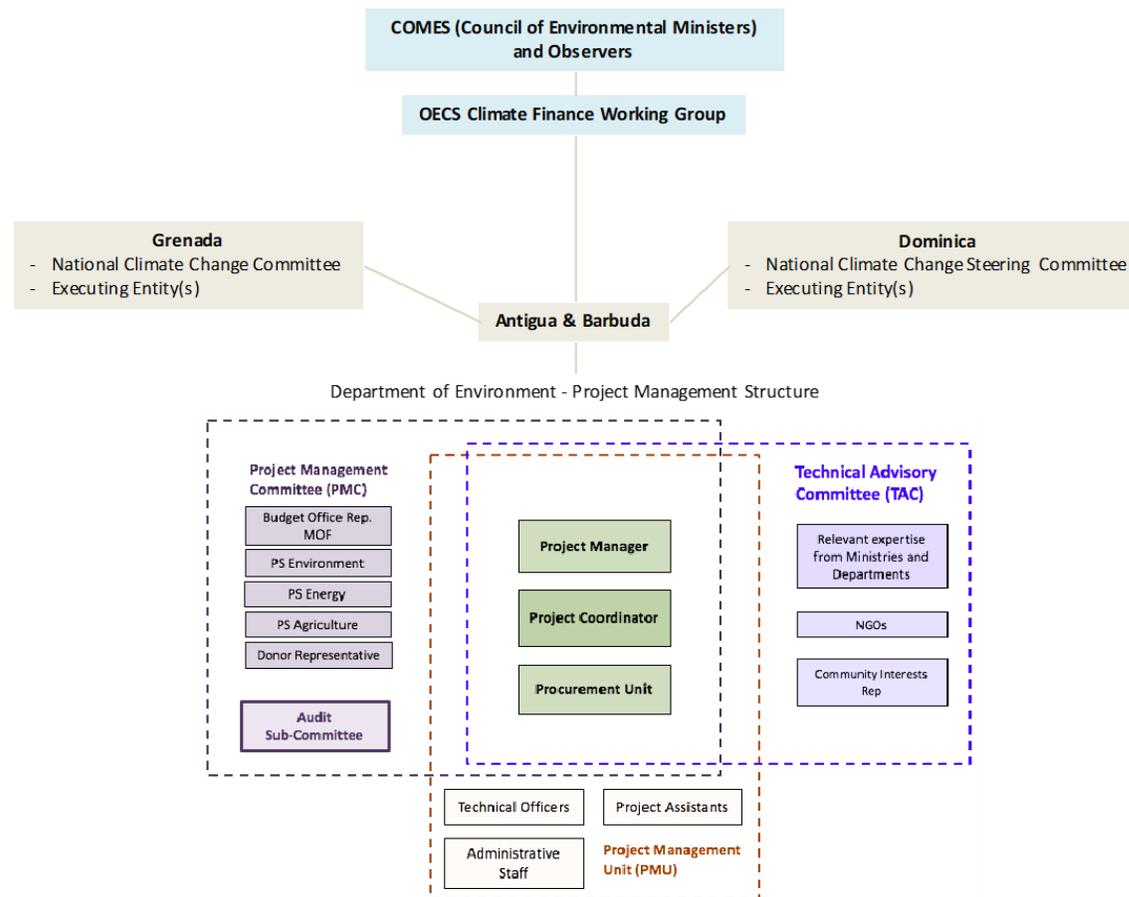

Demonstrating enhanced direct access for NGOs – small grants for adaptation in community buildings –resilience to droughts, flooding and hurricanes

Component 4  
(US\$ 6 million)

Demonstrating enhanced direct access in the private sector – revolving loans for resilience in buildings (homes and businesses)

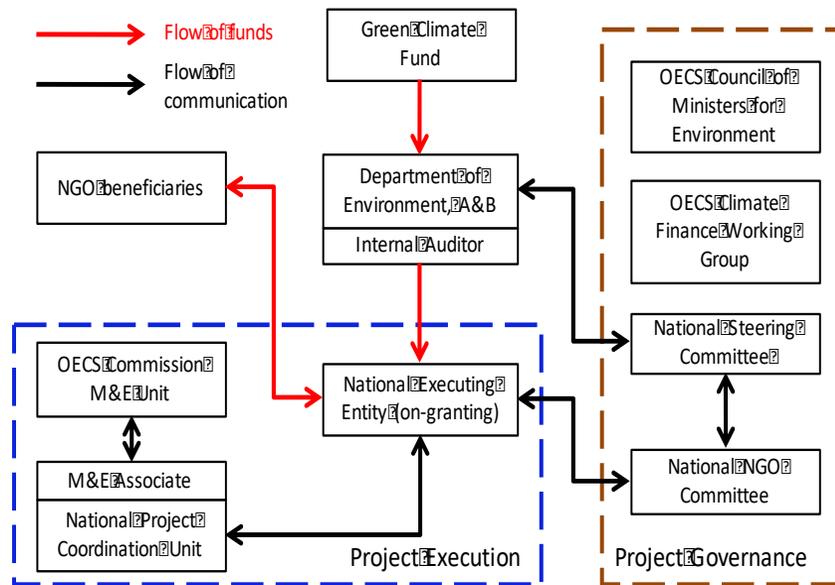

## Antigua & Barbuda - Snapshot

Strengths	Points to consider
Leveraging existing arrangements to demonstrate EDA effectiveness in strengthening regional and multi-country capacity in key targets areas.	Oversights needs to be strong to ensure project strategic focus is maintained throughout implementation (well-structured monitoring and evaluation/reviews).
Potential to establish best practices and lessons that could inform future programming at scale	Project builds on past successful projects and ongoing projects. Alignment/synergies with current/past projects needed to maximize impact.
