Project title:

Carbon Dioxide Gathering Project - Hemmat Petrochemical Company (Phase 1)

Activities

The following actions will be taken for project execution:

1. Technology selection (first class international Licensor will be selected to provide technology and Basic Design Package).
2. An EPCC Contractor will be selected as single responsible party for project execution (joint venture of Iranian and Foreign contractors is preferable).
3. An expert PMC will be selected to supervise and manage the project

Expected outcomes

- List the results to be achieved with the activities funded by this project.

Paradigm shift potential

- *Explain how the proposed project can catalyse impact beyond one-off investment, setting conditions for replication and/or scaling up the project results*
