GCF-1: SHIFTING THE PARADIGM THROUGH USING CLIMATE SCIENCE (2020-2023)

DR ANIA GROBICKI
DEPUTY DIRECTOR OF MITIGATION & ADAPTATION

Realising climate ambitions

19 – 23 August 2019 | Songdo, Republic of Korea

FROM GCF WORKING PAPER NO.1:

« Adaptation : accelerating action towards a climate resilient future »

Adaptation refers to “changes in processes, practices and structures to moderate potential damages or to benefit from opportunities associated with climate change”

Resilience is “the ability of a system exposed to hazards to resist, absorb ...and recover from the effects of a hazard ...”

- Resilience is not necessarily adaptive – but in transformative projects, it is!
- Climate science is the basis for GCF projects which help to shift the paradigm. Supplement gaps in ground data by :
 - Modelling
 - Earth observation (satellite data and imagery)
 - GCF can help to support this (PPF/Readiness funds)

GCF-1
draft Strategic Plan
(4 Outcomes)

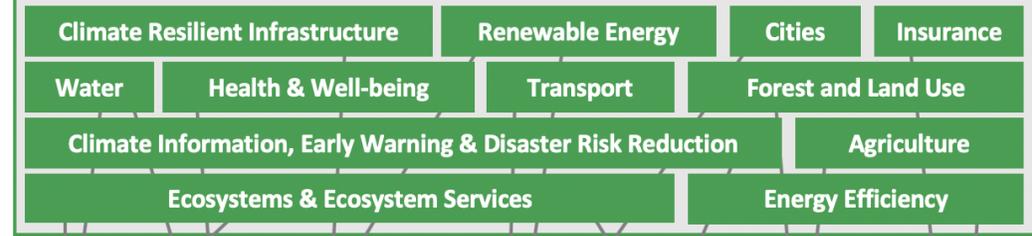

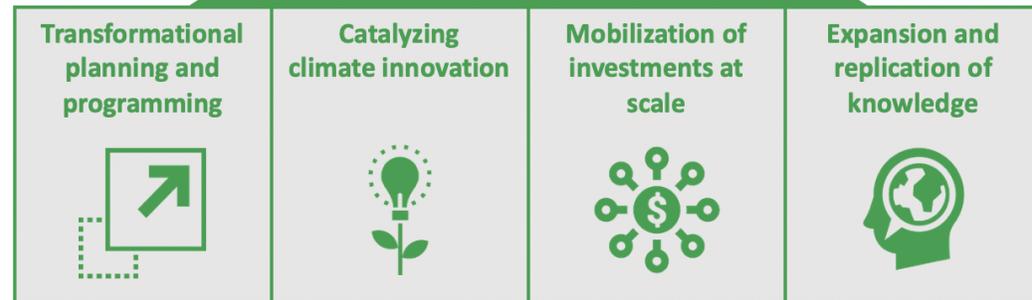

4 Climate transitions
integrate mitigation and
adaptation through
projects

Funding Proposal Manual
(Sept 2019)

Sector strategies, working
papers for consultation,
sector guidance
(March 2020)

Paradigm shift / transformational change in developing countries
towards low-emission, climate resilient development pathways
