

GCF-CREWS CIEWS SCALING-UP PARTNERSHIP: PROMOTING COHERENCE AND COMPLEMENTARITY IN FINANCING GCF AND CREWS CIEWS PROJECTS

GCF CIEWS & SAP TEAM

This presentation illustrates the ongoing work that, under the implementation of the Update of the Simplified Approval Process (SAP) policy, the GCF Secretariat and the Climate Risk and Early Warning Systems initiative (CREWS) are doing to accelerate and scale up climate finance for investments in climate information and EWS in developing countries, in particular in Africa, LDCs and SIDS.

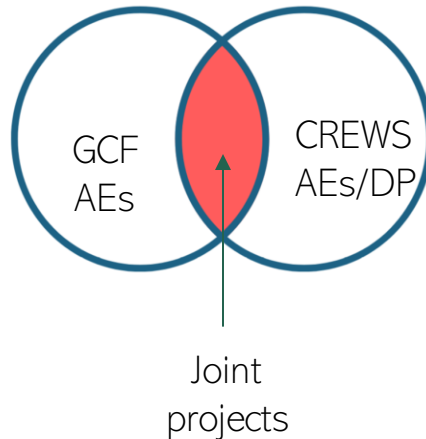

This scaling-up partnerships between CREWS and GCF SAP will contribute to the UN Secretary General EWS for All initiative and boost the efficiency and effectiveness of the climate finance provided by CREWS and the GCF through the SAP in a way that ensure that climate adaptation impacts are people-cantered and that the benefits of early warnings are tailored to the needs of households and communities

GCF-CREWS CIEWS SCALING-UP ARCHITECTURE

Common Accredited
Entities/Delivery Partners

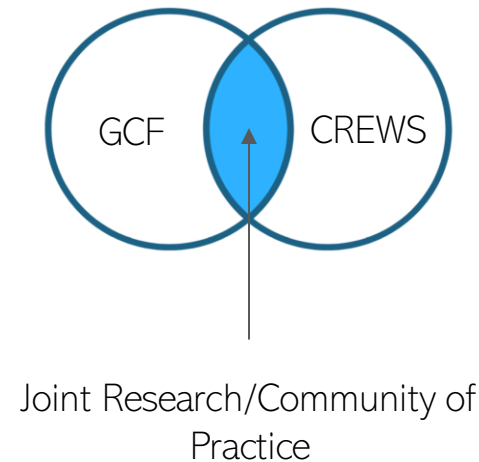

Implementation arrangements for sequencing/co-designing/co-financing projects through SAP support to common accredited entities

Common Countries

Collaboration at the country level where common countries are targeted for support through GCF country programming and CREWS country programming (country diagnostics) for joint programming/project design

Secretariat Level

Institutional collaboration on knowledge brokering through frontier research in climate science and policy and its application to low-emission climate-resilient development.
